COLLECTION OF ANIMAL CELL LINES

To be completed by contributor of cell. Please print or type.

1. Name of Cells A1G3
2. Type of Cell: Epithelial-like _____ Lymphoblast-like _____
Fibroblast-like _____ Other Hybridoma
3. Source of Cell: (Donor Species, Race, Sex, Age, Adult or Embryonal, Normal, Malignant, Organ or Tissue, Blood Type, etc.)
Fusion of P3X63/Aq8 mouse myeloma cells with Balb/C mouse spleen immunized with HUT 78 cutaneous T cell lymphoma cell line.
4. Special Properties, Characteristics, or Uses:
Binds to an 80 kd protein acquired during human intrathymic T-cell maturation of medullary thymocytes. This 80 kd protein is also expressed on RBC, where its expression is regulated by the In(Lu) gene.
5. Give Reasons Why You Feel This Cell Is Important:
Useful in the study of thymocyte maturation and useful in human RBC typing.
6. Life Expectancy: (Give maximum number of serial subcultivations since origin)
Antibody titer constant after 30 passages.
7. Early Passage Levels Available From Frozen Stock, If Any:

8. Name of Originating or Deriving Investigator and Date of Origin:
Barton F. Haynes, M.D. 1983
9. References: (Original description or other appropriate publications. Please include reprints of especially pertinent publications if available.)
Haynes, B.F., Harden, E.A., Telen, M.T., Hemler, M.E., Strominger, J.L., Palker, T.J., Searce, R.M. and Eisenbarth, G.S. Differentiation of human T lymphocytes I. Acquisition of a novel human cell surface proteion (p80) during normal intrathymic T cell maturation. The Journal of Immunology, Vol 131:1195-1200, 1983.
